

JAPCO Pest Control Ltd

PREPARATION FOR COCKROACH TREATMENT

It is necessary for you to remove all pets, cover fish tanks and unplug air filter. Remain out of the unit for approximately 6 hours following the treatment.

Empty all kitchen cupboards, top and bottom, of all items.

Clear all counter tops.

Remove all empty kitchen drawers and place drawers on the counter.

Place all kitchen and bathroom contents on dining table and cover with a sheet.

Pull out fridge 300 mm from wall.

Clean all kitchen areas before **not after** the treatment.

Empty medicine cabinet and vanity in all bathrooms and clear all bathroom counter tops.

For heavy infestations: Move drapes and furniture **1 foot** away from the radiators and all baseboard areas.

After Treatment Information

Ventilate treated areas either by opening windows and doors or through use of air exchange/ventilation systems.

Following the treatment do not wash or vacuum shelves or baseboard areas for approximately 3 weeks. Clean counter tops or any exposed food contact surfaces before using.

Expect to see some activity as the pesticides will flush the roaches from their hiding places.

Place wax paper or a loose shelf liner on the shelf prior to placing items back into the cupboard areas.

Allow at least 30 days for complete control. The pesticides will not kill the egg stage but will stay active to kill the cockroaches as they emerge from their hiding places.
