

Hantavirus & Bird Clean up

JAPCO's team of trained removal experts can offer a quick and safe solution to commercial and residential structures.

Special precautions should be used for cleaning Bird and Rodent infestations.

Birds: Not only can bird droppings be foul smelling but their excrement are full of acidic compounds that can cause damage to many surfaces.

Rodents: Hantavirus is carried by rodents; most commonly deer mice. Cleaning up there urine and droppings could make you sick.
